

Information Security Policy – California Operations

1. Purpose

This Information Security Policy establishes the framework for protecting Company systems, information assets, intellectual property, employee information, customer information, supplier information, and business operations. The Company recognizes that information security is essential to maintaining customer trust, regulatory compliance, operational continuity, and business success. The purpose of this policy is to define security expectations, responsibilities, controls, and procedures that help prevent unauthorized access, disclosure, alteration, loss, destruction, or misuse of information.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

2. Scope

This policy applies to all employees, contractors, consultants, temporary workers, interns, vendors, and approved third parties who access Company systems, networks, applications, facilities, or information. The policy applies regardless of work location and includes on-site, hybrid, remote, and mobile work arrangements. All employees are based in California and primarily work on-site in San Diego, with approved hybrid work arrangements available.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

3. Security Governance

Information security is a shared responsibility across the organization. Executive leadership, managers, employees, contractors, Human Resources, Information Technology personnel, and third-party partners all play important roles in protecting Company assets. Security responsibilities should be integrated into daily business operations and decision-making processes.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

4. Acceptable Use

Company systems, networks, devices, applications, and resources are intended primarily for authorized business purposes. Employees must use Company assets responsibly and

ethically. Unauthorized activities including unauthorized system access, excessive personal use, illegal activities, bypassing security controls, or misuse of Company information are prohibited.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

5. User Access Management

Access to Company systems should be granted based on legitimate business needs and the principle of least privilege. Employees should receive only the access necessary to perform assigned duties. Access rights should be reviewed periodically and removed promptly when no longer required.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

6. Password and Authentication Requirements

Employees must use strong passwords and enable multi-factor authentication whenever available. Passwords should not be reused across systems, shared with others, or stored insecurely. Approved password managers are encouraged. Suspected credential compromise must be reported immediately.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

7. Device Security

Employees must secure Company-issued and approved personal devices used for business purposes. Devices should be protected with passwords, screen locks, encryption where appropriate, updated operating systems, approved antivirus software, and current security patches. Lost or stolen devices must be reported immediately.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

8. Mobile Device Security

Employees frequently use smartphones, tablets, and laptops to access Company resources. Mobile devices present unique security risks. Employees must ensure mobile devices remain physically secure, updated, encrypted when required, and protected from unauthorized access.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

9. Hybrid and Remote Work Security

Employees working remotely or in hybrid arrangements must use secure internet connections, avoid unsecured public Wi-Fi, utilize VPN services when required, protect confidential discussions, secure printed materials, and ensure that unauthorized individuals cannot access Company information.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

10. Data Classification

The Company classifies information according to sensitivity and business impact. Information categories include Public, Internal, Confidential, and Restricted. Employees are responsible for understanding classification requirements and applying appropriate safeguards based on the sensitivity of the information they handle.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

11. Public Information

Public information may be shared externally without causing harm to the Company. Examples include approved marketing materials, published press releases, and publicly available website content.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

12. Internal Information

Internal information is intended for Company personnel and authorized parties. Disclosure outside the organization may create operational or competitive disadvantages. Internal information should not be publicly disclosed without authorization.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

13. Confidential Information

Confidential information includes sensitive business information, employee records, customer information, financial data, contracts, strategic plans, product information, and

other information requiring protection. Access should be restricted to authorized personnel with a business need.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

14. Restricted Information

Restricted information represents the most sensitive category of Company information. Examples may include trade secrets, source code, proprietary algorithms, acquisition plans, security credentials, encryption keys, and regulated data. Enhanced security controls are required.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

15. Confidentiality Obligations

Employees are responsible for protecting confidential and proprietary information during and after employment. Confidential information should only be disclosed to authorized individuals with a legitimate business need. Unauthorized disclosure may result in disciplinary action and legal consequences.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

16. Email and Messaging Security

Employees should exercise caution when sending emails, messages, attachments, and links. Sensitive information should be transmitted only through approved channels. Employees should verify recipients before transmitting confidential information.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

17. Phishing and Social Engineering

Cybercriminals frequently target employees through phishing emails, text messages, phone calls, and social engineering attacks. Employees must remain vigilant, verify suspicious requests, avoid clicking suspicious links, and promptly report potential phishing attempts.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

18. Security Awareness Training

All employees are required to complete periodic security awareness training. Training topics may include password security, phishing awareness, data protection, privacy obligations, incident reporting, acceptable use requirements, and emerging threats.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

19. Incident Reporting

Employees must immediately report suspected or confirmed security incidents. Examples include data breaches, malware infections, suspicious emails, unauthorized access attempts, lost devices, credential compromise, ransomware events, and accidental disclosures of sensitive information.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

20. Incident Response

The Company maintains procedures for investigating, containing, mitigating, documenting, and recovering from security incidents. Employees are expected to cooperate with investigations and follow instructions from authorized personnel during incident response activities.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

21. Physical Security

Employees must protect physical assets including laptops, mobile devices, documents, storage media, access badges, and keys. Visitors should be appropriately escorted and physical security controls should not be bypassed.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

22. Third-Party Security

Third-party vendors, contractors, consultants, and service providers may have access to Company information or systems. Appropriate due diligence, contractual protections, and security requirements should be applied before granting access.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

23. Monitoring and Privacy

The Company reserves the right to monitor Company systems, devices, communications, and network activity in accordance with California and federal law. Monitoring supports security, compliance, operational continuity, and protection of Company assets.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

24. Regulatory Compliance

The Company is committed to complying with applicable laws, regulations, contractual obligations, and industry standards relating to information security, privacy, records management, and cybersecurity. Employees must cooperate with compliance activities.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

25. Records Retention and Disposal

Information should be retained according to business requirements, legal obligations, and records management policies. Information no longer needed should be disposed of securely using approved destruction methods.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

26. Business Continuity and Disaster Recovery

The Company maintains business continuity and disaster recovery capabilities to support resilience during disruptions. Employees may be required to participate in testing, training, or recovery activities.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

27. Policy Violations

Violations of this policy may result in loss of access privileges, disciplinary action, termination of employment, civil liability, criminal penalties, or legal action. The Company takes information security violations seriously and will investigate suspected misconduct.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

28. Responsibilities

Employees are responsible for complying with security requirements, reporting incidents, protecting information, participating in training, and supporting security initiatives. Managers are responsible for reinforcing expectations and ensuring compliance within their teams.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

29. Questions and Support

Employees should direct questions regarding information security, privacy, cybersecurity controls, incident reporting, acceptable use requirements, or policy interpretation to the Information Technology or Security team.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

30. Policy Administration

The Company reserves the right to modify, suspend, or terminate this policy at any time. Nothing in this policy creates a contract of employment. Employees are responsible for complying with the most current version of this policy.

Security is a shared responsibility. Consistent adherence to established policies, procedures, and best practices helps protect Company assets, maintain customer trust, support regulatory compliance, and reduce organizational risk.

Appendix 1: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively

in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 2: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 3: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard

confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 4: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 5: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 6: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 7: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 8: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report

suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 9: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.

Appendix 10: Security Best Practices

Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems

updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance. Employees should maintain strong passwords, use multi-factor authentication, verify requests for sensitive information, keep systems updated, protect physical devices, report suspicious activity immediately, safeguard confidential information, and participate actively in security awareness programs. Security awareness is an ongoing responsibility that requires continuous attention and vigilance.
